Professional Summary

Senior Software Architect / AI Engineer with 12+ years of experience designing distributed, high-scale enterprise systems across aviation and fintech domains. Proven track record of leading system modernization from monolith to microservices, enabling secure, scalable, and compliant platforms for government and global clients. Specialized in AI-assisted development, leveraging tools like GitHub Copilot and Claude Code to accelerate delivery, improve code quality, and reduce engineering effort. Strong focus on system design, observability, security review, and engineering excellence in AI-augmented environments.

Technical Skills

Languages:

C#, TypeScript, JavaScript, SQL

Frameworks & Platforms:

.NET Core, ASP.NET MVC, Web API, Angular, Entity Framework

Architecture & Systems:

Distributed Systems, Microservices, Event-Driven Architecture, API Gateway, System Design, High Availability Systems

Infrastructure & DevOps:

Azure, CI/CD Pipelines, Sonar Cube, Docker (basic), Git, REST APIs

Databases:

SQL Server, MySQL

AI Development Tools & Techniques:

GitHub Copilot, Claude Code, LLM APIs, Prompt Engineering, Retrieval-Augmented Generation (RAG), AI Code Review

Engineering Practices:

Code Review, Secure Coding, Observability (Logging/Monitoring), Performance Optimization, Agile (Scrum), Technical Leadership

Specialist Software Engineer (Acting Architect Role)

General Civil Aviation Authority (GCAA), UAE

Aug 2023 – Present

- Architected and led the **modernization of a nationwide aviation licensing platform**, transforming legacy monoliths into **modular microservices**, improving scalability, fault isolation, and reducing system downtime.
- Designed and implemented **secure distributed integrations via Government Service Bus (GSB)** with major air operators (**Emirates, Fly Dubai, Etihad Air Line, Air Arabia etc.**), enabling real-time interoperability and reducing manual

- Built and deployed an **AI-powered document intelligence pipeline (LLM-based)** to extract, validate, and auto-fill licensing data, reducing manual processing effort by ~60% and improving accuracy.
- Led **technical workshops and executive-level presentations** to aviation stakeholders and senior leadership, demonstrating AI-powered capabilities and driving adoption across multiple air operators.
- Established **architecture governance frameworks**, including design reviews, code reviews, and security reviews aligned with TDRA compliance, successfully passing multiple government audits (7-Star, Service 2.0).
- Introduced **observability practices (structured logging, monitoring, diagnostics)**, improving incident detection and reducing MTTR.
- Leveraged **agentic coding workflows using GitHub Copilot and Claude Code**, accelerating feature delivery and large-scale refactoring, reducing engineering effort from months to weeks.

Stack: .NET Core, Angular, SQL Server, Azure, REST APIs, GSB, LLM APIs

System Analyst / Technical Lead

NETSOL Technologies, Pakistan

Jul 2021 – Aug 2023

- Architected the **Integration Hub for a global fintech platform (NFS)**, enabling scalable communication across distributed services and external financial systems.
- Designed and implemented an **API Gateway (Ocelot)** for microservices orchestration, improving system scalability and reducing integration complexity.
- Led **architecture design sessions and technical decision-making** across multiple teams, ensuring alignment with distributed system principles.
- Implemented **secure integration patterns and data contracts** for multi-region deployments (APAC), supporting high-volume financial transactions.
- Institutionalized **code review and quality gates**, reducing production defects by ~20% and improving maintainability.
- Used **AI-assisted development (Copilot + prompt engineering)** to accelerate prototyping and refactoring, reducing delivery timelines.

Stack: .NET Core, Microservices, Ocelot API Gateway, SQL Server, REST APIs

Senior Software Engineer / Sub-Team Lead

NETSOL Technologies, Pakistan

Aug 2018 – Jun 2021

- Designed and developed **distributed middleware systems** for financial integrations across Malaysia, Singapore, Thailand, and New Zealand.
- Built high-throughput **integration services (WCF/Web API)** supporting mission-critical financial workflows with improved reliability and fault tolerance.
- Optimized system performance through **architecture improvements and query tuning**, reducing response times.
- Led **production deployments and UAT support** across international clients, ensuring system stability and SLA adherence.
- Applied **AI-assisted debugging and development workflows**, reducing issue resolution time and improving developer efficiency.

Stack: C#, WCF, Web API, SQL Server

Senior Software Engineer

Code-Desk, Pakistan

Aug 2015 – Aug 2018

- Architected and developed a **VOIP PBX system** using SIP integration and Web APIs, enabling scalable communication infrastructure.
- Built **Angular-based SPA applications** with RESTful backend services, improving performance and user experience.
- Developed Android applications with **voice-command features**, introducing early AI-driven interaction capabilities.
- Translated business requirements into **scalable system designs and technical specifications**.

Stack: ASP.NET Web API, Angular, MySQL, SIP (PORTA), Android (Java)

Software Engineer

H3 Solution, Pakistan

Feb 2013 – Aug 2015

- Designed and developed **HRMS, attendance, and payroll systems**, handling employee lifecycle, biometric integrations, and reporting workflows, improving operational efficiency for client organizations.
- Built a **desktop-based CRM application (WPF)** with modular architecture, enabling better customer data management and reporting capabilities.
- Engineered **data-driven reporting solutions using Crystal Reports**, supporting business decision-making and compliance requirements.
- Contributed to **end-to-end SDLC**, including requirement analysis, system design, development, and maintenance of enterprise applications.
- Optimized legacy systems through **performance tuning and code refactoring**, improving system stability and reducing recurring issues.

Stack: C#, ASP.NET, SQL Server, WPF, Crystal Reports

Key Projects

AI-Powered Aviation Licensing Platform

- Designed LLM-based document processing system for aviation authority.
- Reduced manual effort by 60% and improved processing accuracy significantly.
- Demonstrated real-world **AI + enterprise system integration**.

Microservices API Gateway Platform

- Built centralized API gateway using Ocelot.
- Enabled scalable service orchestration and reduced system coupling.

Distributed Integration Hub (Fintech)

- Architected integration layer for global leasing/finance system.
- Supported multi-region deployments with high transaction volumes.

Professional Education

- Bachelor in Computer Science (BSCS) from GC University Faisalabad, Pakistan (2009-13)

Certifications

- Microsoft Azure Fundamentals (AZ-900)
- Enterprise Design Thinking Practitioner
